

Mistral AI, ITU-T L.ClimAI

Environmental impact of Mistral models

Learnings:

Environmental impact of AI in Switzerland

Google

Google's Zurich office, the largest research hub outside of the US with over 5,000 employees, focuses on advanced AI solutions across various domains like Google Maps, Search, YouTube, and cybersecurity.

NVIDIA

Located in Zurich since 2008, the tech giant runs a R&D hub with over 200 employees to further develop its software and has acquired several ETH-spin-offs since establishing in Zurich.

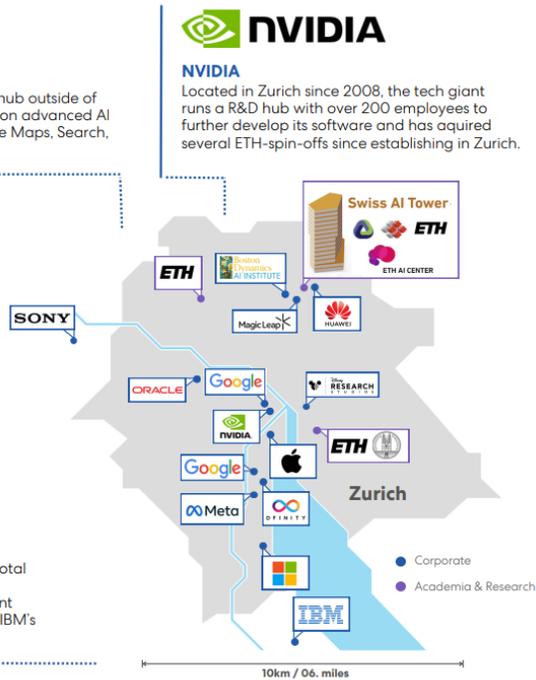

Apple Vision Lab

Apple is operating the "Zurich Vision Lab", focusing on AI research in computer vision, machine learning, robotics, and autonomous systems. This lab is expected to significantly influence future Apple products, including the rumored Apple Car, AR/VR headset, and enhancements to Siri.

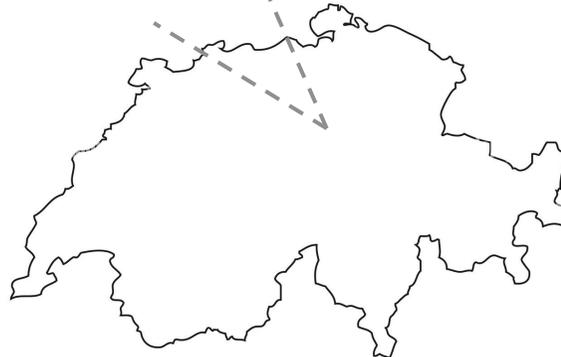

IBM Research Lab

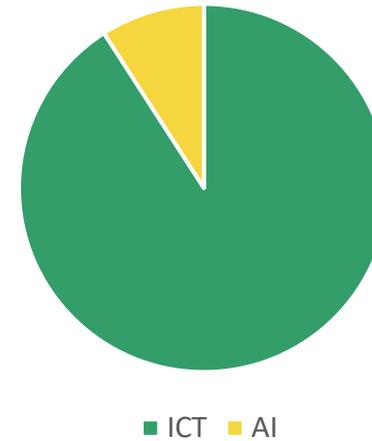

Established in 1956, IBM's Zurich Lab is a pivotal AI research center, working on various AI advancements. IBM partners with Swiss giant ABB to develop industrial AI solutions using IBM's Watson supercomputer.

Visualization idea: ETH AI Center

Direct environmental impact of the ICT in Switzerland

Based on ITU-T L.1450

This study is being done in partnership with ITU.

The results will be published in September.
