for sustainable development

8 – 11 July 2025
Geneva, Switzerland

Enabling AI for Health Innovation and Access

Workshop – 11 July 2025

Dr. Tobias Schonwetter, University of Cape Town

How can intellectual property be effectively managed by innovators and Governments to ensure that AI health solutions reach the market and expand access to healthcare in LMICS / Africa?

Broad framing of the AI, health and IP legal framework on the African continent

- According to the AU, AI is a strategic priority for the continent - and Africa, too, experiences significant growth in AI applications, incl. in the health sector.
- Artificial Intelligence
and the Law in Africa

Edited by
Chinyere Okonkwo | Olatokunbo Olufemi | T. Schwaninger

LexisNexis
- An AI regulation framework from Africa must be **people-centred**, promote **ethical and responsible use of AI**, and ensure the **sustainable development of Africa**.
 - African law and policy makers would have to decide which path to take between adopting a **broad-based approach or a sectoral approach** to AI regulation. Any such regulation needs to be home-grown and **responsive to the peculiar needs of the African continent** in order to effectively harness the benefits of AI, while addressing its challenges.

Broad framing of the AI, health and IP legal framework on the African continent

- **Domestic and regional efforts are underway** to shape tech and AI governance on the continent
 - Just under 10 fully-fledged **national AI Policies / Strategies** (not just general frameworks) & Draft AI Policy in South Africa (2024)
 - Some sector-specific regulations
 - SADC (*rights-based*) Model AI Policy and Regulatory Framework
 - AU Continental AI Strategy (2024) & AU Africa AI Declaration (2025)
 - Support from AU and UNDP and others for national policy development
 - Some emphasis on innovation, transformation, inclusivity, capacity-building, development, human rights, digital self-determination, data protection and (social) equality

Summary Report

Broad framing of the AI, health and IP legal framework on the African continent

Benefits of AI for improving health in Africa are obvious and generally acknowledged.

- Eg, AI enables **better diagnostics and detection** and **improving access to medical and treatment providers**.
- Expanding **AI Adoption in the African health sector** is thus one of the **priority sectors identified in the AU Strategy** and the word “health” is mentioned almost 40 times in the Strategy.

Challenges / opportunities for the use of AI in Africa; and the role of IP in addressing these

Chapter 8 of our AI book examines the increased use of AI in healthcare in Africa and identifies key challenges.

- **Challenges** to the effective use of AI in healthcare in Africa include
 - availability of data and quality of data
 - the replication of bias and injustice
 - paucity of legal regulations
 - inadequate infrastructure
 - costs of AI application and adoption

Challenges / opportunities for the use of AI in Africa; and the role of IP in addressing these

*As a system dealing with creative and inventive outputs, **IP** has the capacity to significantly contribute to the development and deployment of AI in Africa.*

Challenges / opportunities for the use of AI in Africa; and the role of IP in addressing these

IP has the capacity to significantly contribute to the development and deployment of AI in Africa...

- ... obvs as an **incentive to stimulate innovation and creativity** in the area of AI.
- But also through **scope delineation & exceptions.**

Challenges / opportunities for the use of AI in Africa; and the role of IP in addressing these

Challenges to the effective use of AI in healthcare in Africa **include**

- availability of data and quality of data
- the replication of bias and injustice
- paucity of legal regulations
- inadequate infrastructure
- costs of AI application and adoption

Equitable access to data is considered key when creating and curating datasets required for machine learning. And the **low availability of data from Africa has the potential to exacerbate inequalities and social exclusion.**

But **copyright** law can become a **stumbling block for data access** because many data sources (written texts, images, spoken word etc.) are subject to © protection.

Key Policy Recommendation

So we really need to find the right **balance** here **between control over data** as provided for, among other things, by IPRs **and access to such data**.

I.o.w., it is crucial to appreciate that the context of the continent requires not only robust IP protections for enabling AI development, but also an **IP system that sufficiently and flexibly caters for data access and use, data curation and disclosures**.

Copyright e&l (including for text and data mining) can therefore help African countries to better utilise AI and meet their development goals.

Challenges / opportunities for the use of AI in Africa; and the role of IP in addressing these

... but: **finding the right balance between access and control is a delicate task**, not least because we may also need to consider the legitimate concerns of custodians of indigenous knowledge and data and their quest for self-determination.

Cradle Principles On Knowledge Governance

March 11, 2024

CUJIP's project on [Copyright and the Right to Research](#) organized a group of leading copyright academics, stakeholders, and computational researchers for a policy retreat in the Cradle of Humankind, South Africa, February 23-25, 2024. The subject of the meeting was enabling African and other Global South uses of digital research tools without promoting "data colonialism" concerns, including wrongful uses of traditional knowledge and community-held information.

A Talking Health Chatbot in African Languages: DSFSL, University of Pretoria

Jun 28, 2025 | Case Studies

A project of the Data Sciences for Social Impact (DSfSI) group, University of Pretoria, led by Professor Vukosi Marivate, is developing a talking health chatbot in African languages to provide accessible, culturally relevant health information to underserved...

Jun 5, 2025 | Blog, Case Studies

The Masakhane Project showcases the transformative power of open, collaborative efforts in advancing natural language processing (NLP) for African languages. However, its reliance on the *FW300* dataset—a vast multilingual corpus primarily comprising copyrighted...
